SECTION II  ENGLISH (Reading Comprehension) - (For Humanities Group)

Question: Read the given passages and answer the comprehension questions by selecting the best option for each question

Passage One

Those privileged members of the community who have been through a secondary or public school education may be expected to know something about the elementary physics and chemistry of a hundred years ago, but they probably know hardly more than any bright boy can pick up from an interest in wireless or scientific hobbies out of school hours. As to the learning of scientific method, the whole thing is palpably a farce. Actually, for the convenience of teachers and the requirements of the examination system, it is necessary that the pupils not only do not learn scientific method but learn precisely the reverse, that is, to believe exactly what they are told and to reproduce it when asked, whether it seems nonsense to them or not. The way in which educated people respond to such quackeries as spiritualism or astrology, not to say more dangerous ones such as racial theories or currency myths, shows that fifty years of education in the method of science in Britain or Germany has produced no visible effect whatever.

Adapted from: The Social Function of Science, John D Bernal (1939)

1. The author blames all of the following for the failure to impart scientific method through the education system except

   a. Do students know more about the world about them?
   b. Do students spend more time in laboratories?
   c. Can students apply their knowledge logically?
   d. Have textbooks improved?
