NED University Journal of Research

This issue of the Journal complete all the changes that were approved by the International Advisory Board for the new format a year ago. The readers will notice that in addition to the original research papers, two discussions on the articles, which were published in the June 2009 issue, are included in the current issue. All appreciations go to both the authors and reviewers. I hope that their support and assistance will continue in future as well.

This first issue of the NED University Journal of Research in hand brings together six original papers, which reside in the areas of Geotechnical Engineering, Chemical Engineering, Environmental Engineering, Computational Fluid Dynamics, Biodiesel Engine Testing, and Structural Health and Monitoring. I am sure that the readers will appreciate the variety of the topics covered in the journal keeping the interests of different readers in view. Further one paper is being reproduced after taking due permission from the original publisher, being in the area of Computational Fluid Dynamics. The selection of this paper is based on its significant value for the academics in Pakistan. As mentioned above, two discussions and authors' closures are also included. I hope that the published articles will be of interest to researchers and academicians.

While we enter in the third year of our publication we look forward to receive comments from our valuable readers.
