

Launch of Intercontinental "UWS-NED outdoor Air quality monitoring Dashboard"

We are pleased to announce that NED University of Engineering and Technology and University of the West of Scotland have successfully established and launched an inter-continental, "UWS-NED outdoor Air quality monitoring Dashboard" capable of recording and displaying air quality data from UWS and NEDUET campuses at a common platform.

This is the first major step towards establishing resilient networks in both countries, to gather data on physical and natural phenomenon, and take "Data-Driven" decisions and approaches to Climate Action, Climate Change, and disaster management. We expect to expand these common dashboards to include all kinds of critical data which will help us establish correlations and dependencies using AI techniques, resulting in proactive decisions and preemptive actions.

The teams from NED University of Engineering and Technology and University of the West of Scotland are led by myself, Prof. Muhammad Imran Aslam and Prof. Muhammad Zeeshan Shakir, respectively. Special mention to Cezar Anicai, Dr. Sundus Ali, and Dr. Syed Talib Abbas Jafri for providing their much-needed support.
