

Senior Software Engineer - Node.Js Backend

Brief Description:

The ideal candidate should have 2-4 years of experience of working on building scalable products and platforms using Node.js. The candidate should have worked on Node.js frameworks like Express, Meteor, Socket, etc. and should be well versed in developing back ends for highly scalable applications. Experience of working full-stack on MEAN or MERN stacks would be an added advantage. Candidate would be responsible to implement and maintain best practices related to code quality and system design, and write testable, reusable and efficient code. The candidate should also demonstrate leadership qualities to lead parts of the growing team as needed.

2. Software Engineer - React.Js Frontend

Brief Description:

The ideal candidate should have 1-2 years of experience of working on building scalable products and platforms using React.js. The candidate should have experience on patterns and state management flows like Flux, Redux, etc. and should be well versed in developing user facing frontends for highly scalable applications. Experience of working full-stack on MERN stack would be an added advantage. The candidate would be responsible to implement and maintain best practices related to code quality and system design, and write testable, reusable and efficient code.
