Position: Senior Software Engineer

Job Description:
Jin Technologies is looking for energetic and self-driven individuals for its development team.

Duties and Responsibilities:

* The candidate must be career-oriented and be looking for a long-term commitment

* The candidate can be required to work on a variety of diverse and challenging web, desktop and mobile application development projects
  as well as writing business process applications

* Attention to detail is essential, with the ability to work independently

* It is quite possible that the chosen candidate will be working on different projects (possibly in different technologies) on a regular
  basis, so they   should be able to keep focus while switching between projects

* The work involves high commitment under tight deadlines

Candidate should have:

* **Bachelors degree in Computer Sciences or related field**
* **4+ years of Industry experience**

* Experience in custom web applications, development and deployment in LAMP/LEMP environment

* Experience with PHP, MySQL, HTML5, CSS, JavaScript, Responsive Web Design and Angular

* Experience in NodeJS, Bootstrap, TypeScript, and CodeIgniter framework, would be preferred

* Knowledge and understanding of Third party API integration (Stripe, SendGrid, Facebook etc.)
* Strong understanding of security requirements in web development environment
* Knowledge of Amazon Web Services
* Understanding of GIT version control system

* Demonstrated interest in database application development

* Disciplined programming skills with an eye for professional user interfaces

* Familiarity with Human-Computer Interface (HCI) guidelines

* Effective communication skills
