

Position Title: Analyst Software Engineer

Organization: Ibex.

Location: Karachi

Qualification: Bachelor's degree in Computer Science or equivalent.

Experience: 0-2 years

Job Specifications:

- Bachelors in Computer Science or Equivalent.
- Should be conceptually very strong in machine learning / natural language processing concepts and have prior development experience on machine learning products.
- Should be skilled and have prior working experience in Python, SK Learn, Keras/TensorFlow, PyTorch or other deep learning frameworks.
- Idea of good development practices and design patterns and their application on enterprise level applications.
- In addition, should have good knowledge of writing SQL queries. Concepts/prior working experience on big data a plus.

Job Description:

The individual will be responsible for development on Artificial Intelligence products that the team already has in portfolio. They will also have responsibility of extending the current solution for text classification/NLP services in place for CX products. Will also be required to extensively research on deep learning technologies and implement improvements on the current solution.
