Company: ARK Re, Lahore – <https://ark.re> / <https://jobs.ark.re>

Job title: Backend Development

Engineer **Reporting to:** Backend

Lead Engineer **Hours:** Full time

Location: WFH, Lahore, or Islamabad

Salary: Competitive start and growing, personal health insurance

Date: December 2021

ARK is an award winning UK-based international consulting firm that creates innovative digital services. Since 2015, we have a growing team based in Lahore and Islamabad that analyses, designs, and **develops** exciting new products. We're working on SHAPE; see <https://mysha.pe>. Being **ISO27001** and **ISO9001 certified**, we are high quality focused.

We're looking for a **full-time Backend Development Engineer** to join our amazing Dev Team of .NET experts and front-end React developers. We've built advanced data applications for our global digital platform. We've got the **latest 2022 Microsoft Azure** stack using the best **cloud** development tools. We develop with **agile** methodology. Led by our Technology Lead in **California**, we'll help you embrace the **latest** technology and best practices to succeed at every level; our project, our team, and your career.

We're based in Lahore and Islamabad, but welcome applications from anywhere. You need excellent spoken and written English. Your personality needs to be **energetic, dynamic**, innovative, and highly driven. You'll be trained and guided by experienced **Senior Developers**, while bringing the best of your own ideas and **solutions** to our thriving team. You'll also work closely with our in-house product and design experts and be supported by them to develop the **best code** ever!

The role requires you to:

- Have a BSc Computer Science/ IT/ Software Engineering degree from a leading university
- A strong can-do attitude and passionate about coding perfection
- Have around 1 year .NET and C# programming skills with a good knowledge of its ecosystems
- Made a good start in database and API development, testing, and maintenance
- Have experience with code versioning tools like Git and Bitbucket
- Have experience of using tools for code analysis and performance/responsiveness of applications
- Knowledge to define and implement automated build and deployment processes using CI/CD technologies and other DevOps principles
- Be analytical, confident, inquisitive, a strong team player,

and an excellent communicator What we offer:

- A competitive salary with increase upon personal and company performance
- Working with a team of ambitious and high performing individuals with diverse backgrounds
- A flat organisation structure, minimal hierarchy, that accommodates all experiences and skill levels
- A culture of flexibility, trust, and empowerment
- A vibrant and supportive environment for you to learn, grow, and succeed
- First hand experience of seeing a business launch, go global, and achieve fast growth

Interested? Please send your CV preferably with a cover letter to hello@ark.re with the subject **Backend Developer**. With us, you'll learn lots about how digital products are professionally designed, developed, tested, launched, and marketed. If you watch closely, you'll see the secrets of how to successfully build and operate a global business.
